

# Introduction to Model-View-Controller (MVC) Web Programming

**Sunnie Chung**

# General 3 Tiered Architecture

- First tier: Client side code (Web-browser)  
e.g. (X)HTML, Javascript, Java, Flash
- Second tier: Server side code  
e.g. C/C++, Perl, PHP, Java, Ruby, Python
- Third tier: Server side Database Server  
e.g. RDBMS: MySql, MS SQL Server  
NoSQL: MongoDB

# Model View Controller

- Architectural Pattern from Smalltalk (1979)
- Decouples Data and Presentation
- Eases the development

- Tier 1: View (Client)
- Tier 2: Controller (Server)
- Tier 3: Model (Database)

- Presentation:
  - View is the User Interface (e.g. button)
  - Controller is the Code (e.g. callback for button)
- Data:
  - Model is the Database

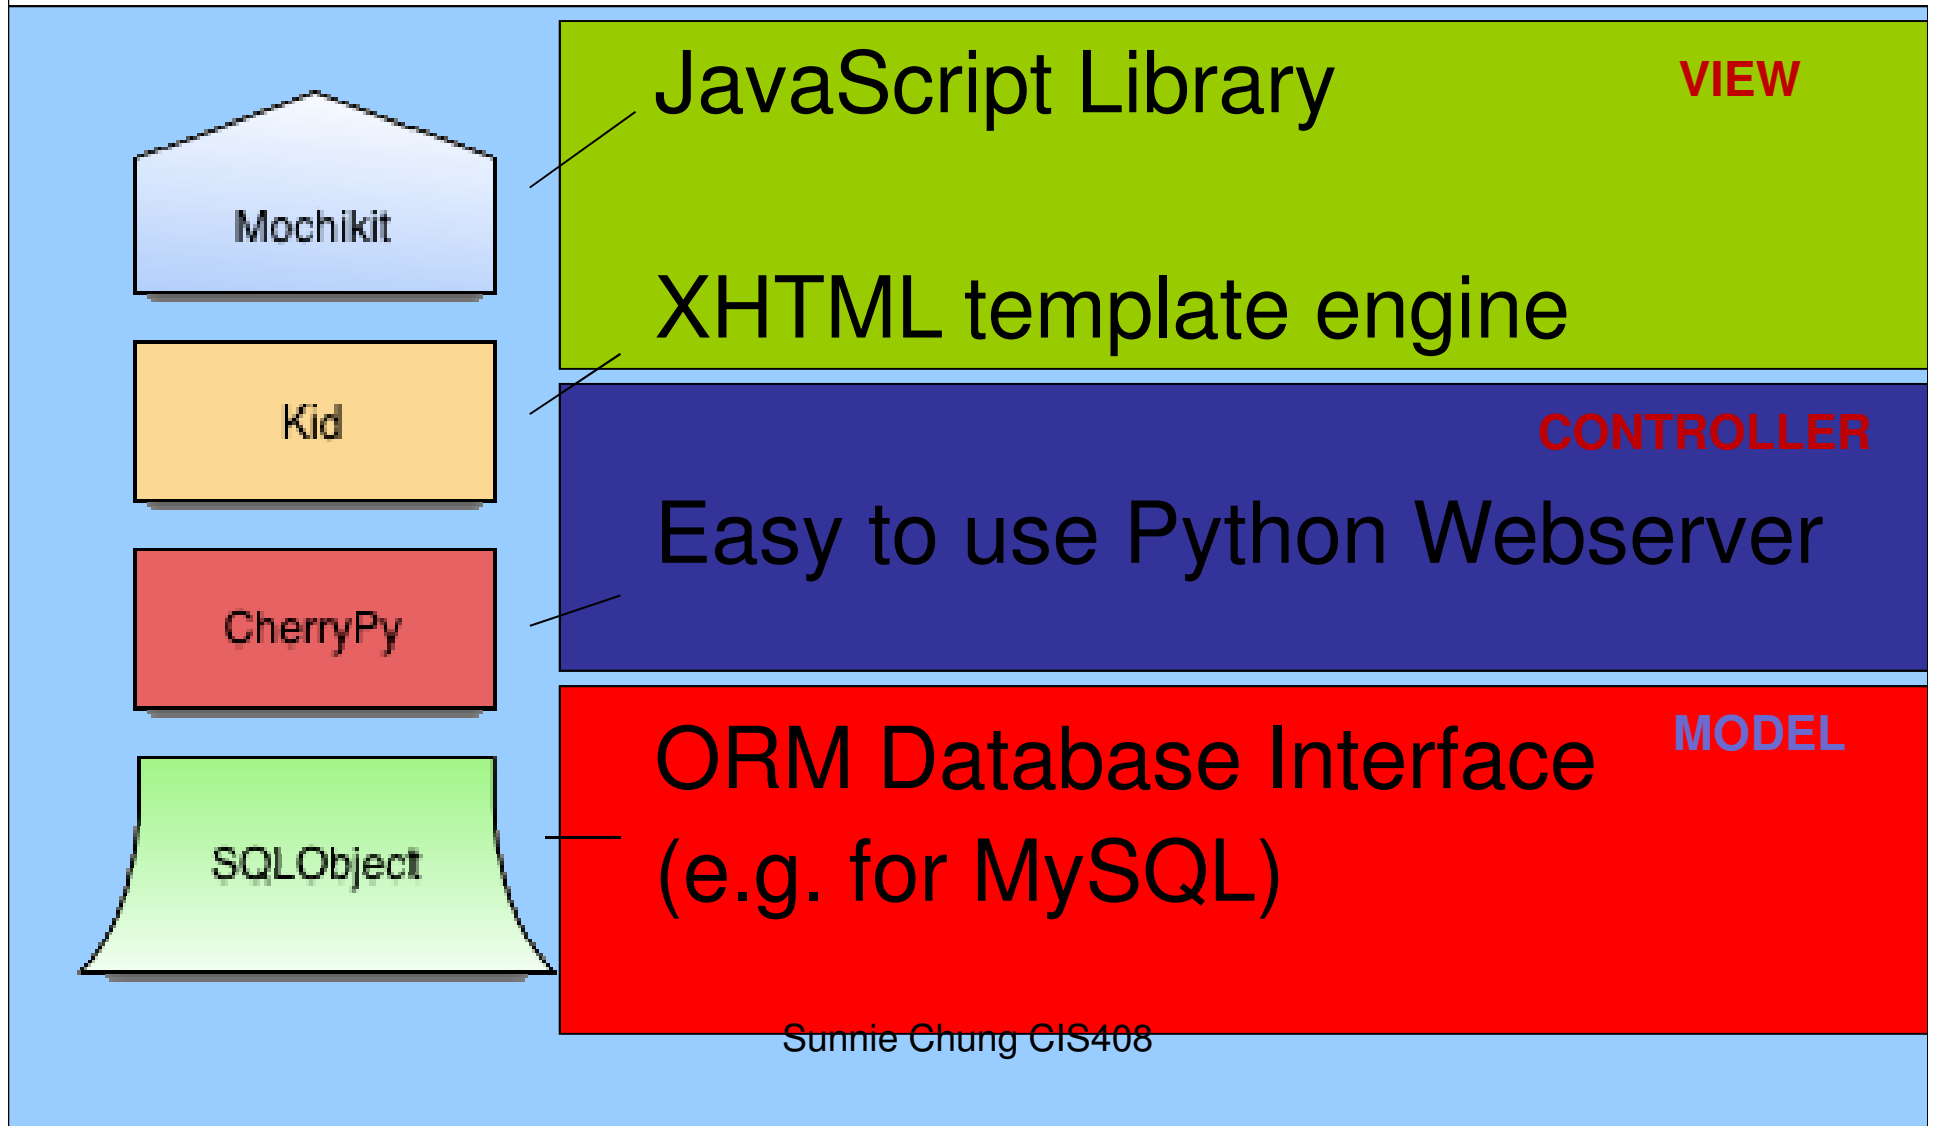

# Example Control Flow in MVC

- User interacts with the **VIEW UI**
- **CONTROLLER** handles the user input (often a callback function attached to **UI** elements)
- **CONTROLLER** updates the **MODEL**
- **VIEW** uses **MODEL** to generate new **UI**
- **UI** waits for user interaction

# MVC – general example

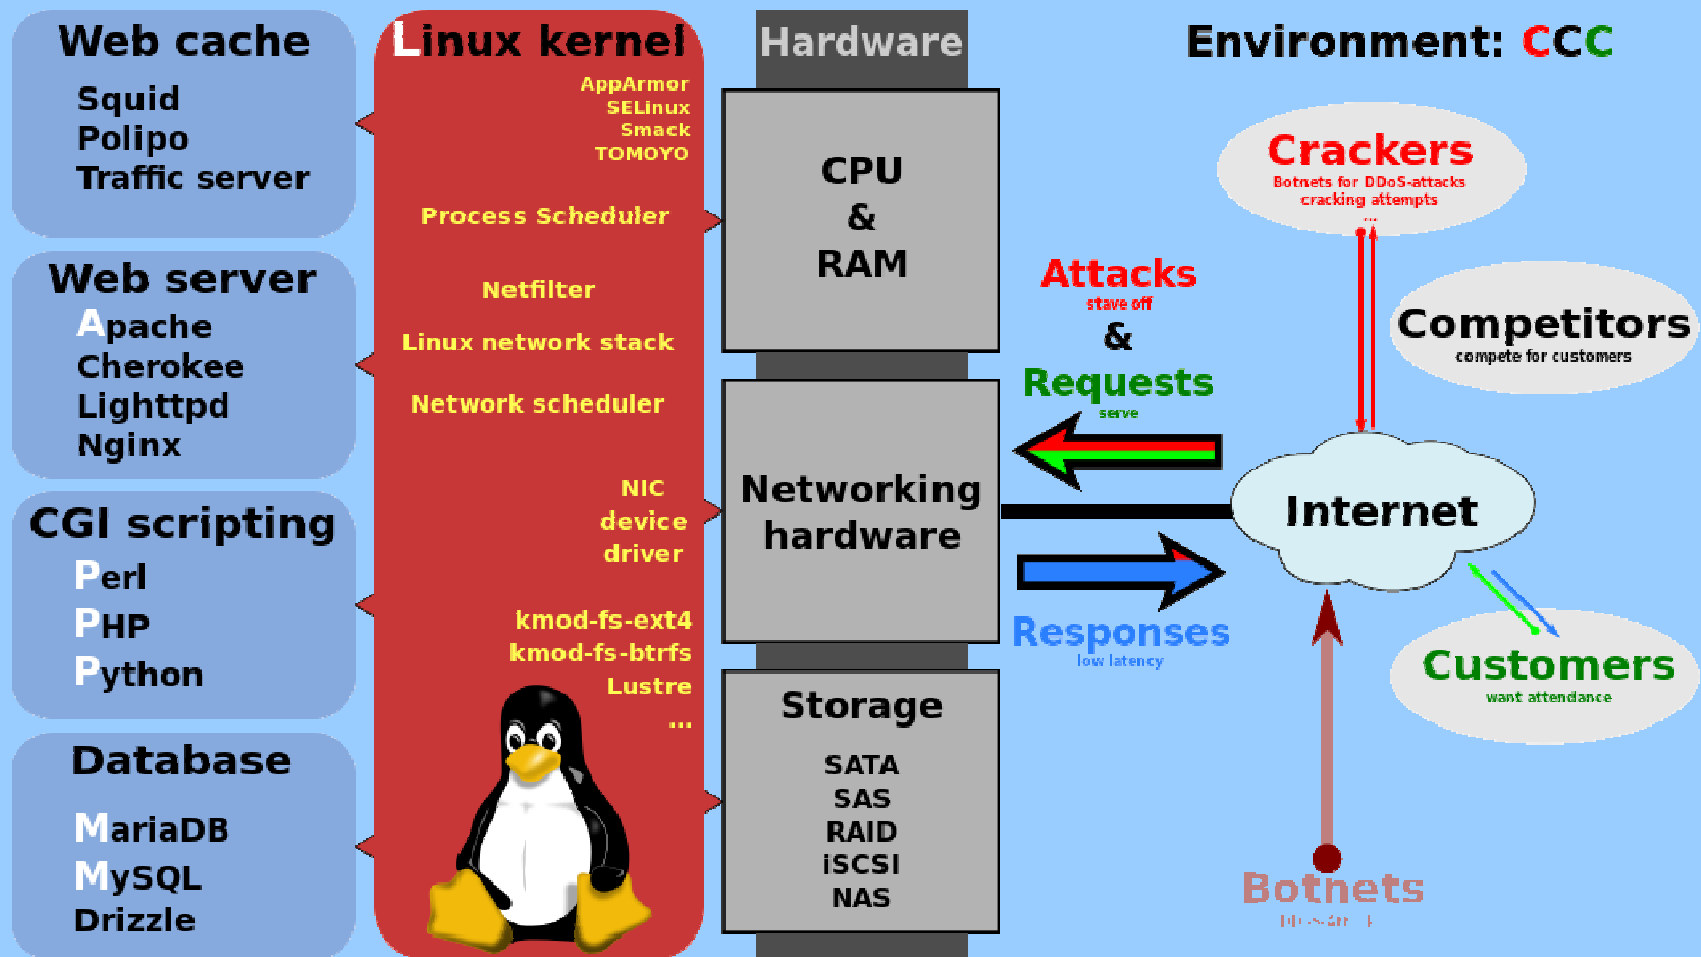

# Examples of Platform

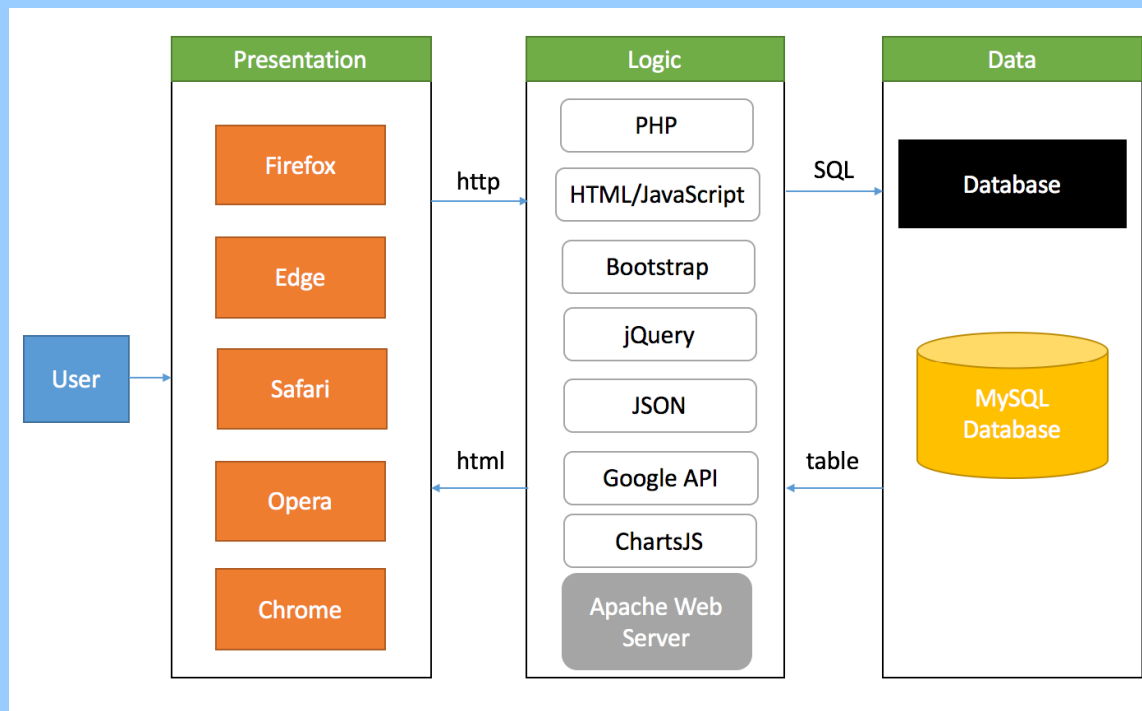

# LAMP(Linux, Apache, MySQL)

# WAMP/LAMP Stack

- **Apache** Webserver and **PHP**
- **MySQL** Database Server on
- Window/Linux with **ODBC**

# ASP.NET with MS SQL Server

- UI: WebMatrix, BootStrap
- IIS Web Server with Angular JS  
**Internet Information Services (IIS)**, formerly **Internet Information Server**) is an extensible Web Server created by Microsoft for use with Windows NT family. **IIS** supports HTTP, HTTPS, FTP, FTPS, SMTP and NNTP.
- Visual Studio IDE **.NET Framework for ASP Web Applications** (C++/C#, JAVA) and XML Web Services
- Database Server : MS SQL Server  
with ODBC (for C++/C#) or JDBC for (JAVA).

# JAVA Platform

- UI: Java **Frame Work**
- Java **Frame Work** for Application Logic
- DB Server: Oracle/Any Relational Database Server with
- **JDBC** (Java Database Connectivity) API
- Linux/Window Platform

# JAVA Script Framework:

- Node.JS for Webserver
- Anguar.JS for Client Side
- Bootstrap for UI
- MEAN Stack: with MongoDB
- NoSQL Database Server: MongoDB  
with Node JS API (e.g. Mongoose)
- Relational Database Server : e.g.MySQL  
with Node JS API (e.g. node-mysql)

# Components Interaction During the Execution of a Database Query
